

REIMAGINE

A more strategic approach to reducing drug spend and building system-wide supply chain solutions

SafecorLogics is a revolutionary new program from Safecor Health that enables your health system to warehouse and supply multiple locations from our platform, helping your pharmacies gain more **control, savings, efficiency** and **support**.

The **SafecorLogics** platform — backed by over 40 years of expertise and driven by your health system's drug purchasing data — helps multi-site, multi-state health systems consolidate order volume across numerous hospitals, standardize items, reduce drug and packaging costs, and improve staffing.

Our strategic platform.

Your health system's biggest opportunity to reduce drug spend.

REIMAGINE

- Uncovering significant drug purchasing savings for your health system
- Lowering labor costs and improving employee satisfaction
- Maximizing operational performance

All with no incremental investment.

How it works

- 1 Safecor Health uses your health system's drug purchasing data to perform a system-wide savings analysis, identifying proven, measurable savings opportunities specific to your health system.

\$3.7M in annual savings

identified for a **13-hospital** health system

\$1.8M in annual savings

identified for a **20-hospital** health system

\$4.2M in annual savings

identified for a **23-hospital** health system

\$3M in annual savings

identified for a **52-hospital** health system

- 2 Once you receive the results of your drug purchasing savings analysis, Safecor Health and your health system agree to a standardized selection of items, volumes and fulfillment details.

- 3 Your health system places an initial system-wide repackaging order for all hospitals under one wholesaler ordering account.

4 Your order is delivered to Safecor Health and repackaged into unit doses according to your specifications. We check each repackaged drug is for quality multiple times during the repackaging process.

✔ Drug verification

✔ Labeling and bar coding

✔ Cleaning validation

✔ Packaging materials

✔ Expiration dating

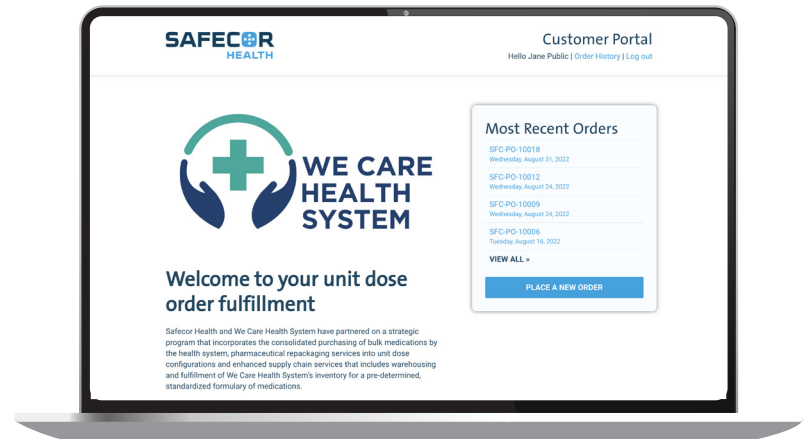

5 Safecor Health stores your repackaged unit-dose products in our finished goods warehouse.

Have your own warehouse where you'd like to store your finished goods inventory?

No problem! Safecor Health will work with your health system on additional options.

6 Your health system's hospitals use our online fulfillment portal to request unit-dose finished goods from your health system's dedicated inventory in our warehouse.

7 Safecor Health fulfills the individual hospital's request from your health system's dedicated inventory and ships it the same day directly to the hospital.

8 Your health system monitors your inventory and places bulk replenishment orders to maintain par levels. We repackage bulk replenishment orders into unit doses and add them to your health system's finished goods inventory — and the cycle repeats!
